

Dmytro Mochalov

STUDENT

Junior .NET developer

Professional summary:

I am a full-stack .Net developer with a passion for learning and an openness to embrace new technologies.

My experience spans across .Net Core, ASP.NET Core, JavaScript, HTML, CSS/SCSS, Bootstrap, Angular, React, Python Sklearn, Docker, Azure, MSSQL server, Postgresql, MySQL and Git.

I thrive on challenges and continuously seek to enhance my skills to deliver top-notch solutions in the ever-evolving world of technology.

Commercial experience:

Junior .NET Full-stack developer
1 month of internship and 2 month of work
2023 June - 2023 August

Projects I have worked on:

- LuminaryOne - web site for doctors from clinic, with lot of statistics and features like adding new patients, make diagnoses and conclusions from survey, calculations of metrics.
Stack: .NET 6(ASP.NET core Web API), Angular, Sql server
My responsibilities: Bug fixes on server and client, adding and fixing calculations of metrics, working with cdc, implementing new business logic, improving performance of sql queries.
- ExpressHeyo - Korean international delivery service.
Stack: .NET 6(ASP.NET core Web API), Angular, MySql
My responsibilities: bug fixes, adding filters, adding new pages, fixing ui, managing entities, adding new business logic.

Non-commercial experience:

- DjinniClone - <https://github.com/dexon03/DjinniClone>

About project:

JobSearchApp is a web application designed for IT job searching, catering to three user types: Recruiters, Candidates, and Admin.

The application offers features such as: searching, filtering, and paging for vacancies and candidates.

Recruiters benefit from an integrated ChatGPT system for auto-generating vacancy descriptions, enhancing efficiency in creating structured and comprehensive job listings. Candidates can upload PDF resumes directly to their profiles, allowing recruiters to view them without local downloads. The built-in chat system facilitates communication between recruiters and candidates, keeping work-related conversations within the app. The application also includes pop-up messages to notify users of errors or incorrect actions.

Stack: .NET, PostgreSQL, Redis, Docker, RabbitMQ, React, Redux, Redux Toolkit, SignalR

- eShop - <https://github.com/dexon03/eShop>

About project:

Simple eShop developed in Clean Architecture with CQRS pattern

Stack: ASP.NET Web API + React + Postgresql
